

PURPLE GUIDE

THE SOLUTION FOR OPTIMIZING PACKAGING LINES

The Purple Guide lifecycle navigator from Möllers Packaging Technology increases the service life of packaging machines in the high-performance sector to ensure a smooth and continuous production process at all times.

With Purple Guide, we create a holistic consulting approach for our customers. Our framework enables you to determine the current technical condition of your machines and combines suitable solution concepts with your corporate strategy – optimized plant performance for long-term success. The consulting approach achieves reliability, predictability, risk reduction and transparency of the entire packaging line.

YOUR BENEFITS

- » Maintain and improve reliability of your equipment
- » Enhance performance and profitability of your installed systems
- » Optimize inventory management and availability of critical spare parts
- » Strategic and holistic approach for superior plant performance

HOW DOES THE PURPLE GUIDE OPERATE?

1

STATUS QUO ASSESSMENT:

The basis of our consulting approach is the detailed determination and assessment of the status quo. This is done with a detailed inspection of the current status and performance of the installed systems.

2

EVALUATION:

With the basis of a comprehensive evaluation of the inspection results, necessary measures are determined. These defined measures promote the sustainable improvement of system condition, performance and productivity.

3

CUSTOMIZED STRATEGIC PLANNING:

Strategic planning based on the results forms part of the consulting approach. Our customers receive a detailed report and are guided by our experts in a personal workshop on strategic action planning.

SUCCESS PLANNING PACKAGE

- » Lifecycle Support
- » Maintenance Strategies
- » Spare Parts
- » Upgrades & Retrofits
- » New Installations
